AIAuto

AIAuto - AI Saas & Technology website Template

? Getting Started With Your Figma File

1. Visit **figma.com** and log into your account.
2. In the File Browser, select **Import** in the upper-right corner.
3. Choose your *Figma (.fig) file* or design assets from your computer.
4. Wait for the file to finish uploading — larger files may take a moment
5. After the upload is complete, your file will appear in your project list and is ready to open and edit.

? Adding Images to Figma

1. **Use the Menu**

Go to **File → Place Image**, pick your file, and click to drop the image onto your canvas. Shortcut: **Shift + Cmd/Ctrl + K.**

2. **Drag & Drop**

Drag any image from your computer and **drop** it onto your canvas. Figma will import it instantly.

3. **Copy & Paste**

Found an image online? Just **copy** it and **paste** it directly into Figma. Perfect for quick inspiration or references.

? How the Components Work

- Components cannot be edited directly in variant layouts — please make all changes in the main component.
- All components in this file are built using Figma's Auto Layout and Variants.
- You can customise any component by selecting it and adjusting its properties from the right sidebar — such as size, state, or color.

? Fonts & Visual Style

- Geist - https://fonts.google.com/specimen/Geist
- Instrument Serif - https://fonts.google.com/specimen/Instrument+Serif
- Inter - https://fonts.google.com/specimen/Inter
- Montserrat - https://fonts.google.com/specimen/Montserrat
- Switzer - https://www.fontshare.com/?q=Switzer

? Need Help

Having trouble with the Figma file or need assistance? Just drop us a message and our team will get back to you as soon as possible.

Thanks for choosing our product — we hope it makes your workflow easier!
